REDUCED SERVICE COSTS

- Reduced spare part costs through the use of current series components
- Higher system stability

IMPROVED OPERATING CHARACTERISTICS

- State-of-the-art control technology
- Higher operational reliability proven in more than 13,000 systems worldwide

WE SUPPORT THE LIFETIME EXTENSION OF THE AGED CONVERTER SYSTEMS. THE CSC I X IS A NEW SOLUTION FOR INSTALLED GE/CONVERTEAM PROWIND SYSTEMS.

The **CSC I X controller** is based on the existing and proven CSC4 controller in more than 13,000 converter systems globally. The new upgrade to CSC I X is suitable for the installed GE/Converteam **ProWind systems** - for all the so called **A10 control** boards. The first replacement product is available for the market since late 2021. All converters equipped with a CSC4 or CSC I X can be optionally connected to ConverterTec's **OneAccess** solution -

allowing remote and in-depth condition monitoring of the power converter.

In addition, all customers opting for a **CSC I X** will also have access to the ConverterTec's toolchain to access data and troubleshoot the converter system using the **SystemTool** and **DataVisualizer** software. These software tools make an enormous contribution to reducing the wind turbines downtime to a minimum.
